Telnet Activity

- Connect to the Class network (Green Cables)

- First identify your IP address using the Command Prompt (CMD)

- Give your IP to your neighbor

- Activate WireShark and start scanning

- Connect to the other computer using the Telnet Command

- Navigate your way to the "C:\" drive – **Screenshot this image into Word**

- You will make a new directory in this folder and name "test" – **Screenshot this image into Word**

- Now use the display filter for Telnet activity in Wireshark - **Screenshot this image into Word**
